The Fund seeks to track the return of the gold spot price

KEY BENEFITS

- 1 Targeted exposure to the gold spot price
- 2 Direct investment into gold
- 3 Single commodity exposure

Key Risks: Investment risk is concentrated in a single commodity. This means the Fund is more sensitive to fluctuations in the price of gold. The value of gold may be subject to substantial fluctuations. Factors such as supply and demand, localised economic, political or environmental events, transportation, customs and fiscal restrictions may impact the value of gold. Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily. Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

The figures shown relate to past performance. Past performance is not a reliable indicator of future results and should not be the sole factor of consideration when selecting a product or strategy. Share Class and Benchmark performance displayed in USD, hedged fund benchmark performance is displayed in USD. Performance is shown on a Net Asset Value (NAV) basis, with gross income reinvested where applicable. Performance data is based on the net asset value (NAV) of the ETF which may not be the same as the market price of the ETF. Individual shareholders may realize returns that are different to the NAV performance. The return of your investment may increase or decrease as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation. **Source:** BlackRock

GLOSSARY

Total Expense Ratio (TER): A measure of the total costs associated with managing and operating a fund. The Total Expense Ratio (TER) consists primarily of the management fee and other expenses such as fund administration, custody, and registration fees and other operating expenses. It is expressed as a percentage of the fund's total net asset value.

Product Structure: Indicates whether the fund buys the actual underlying securities in the index (i.e. Physical) or whether the fund gains exposure to those securities by buying derivatives, such as swaps (known as 'Synthetic'). Swaps are a form of contract that promises to provide the return of the security to the fund, but the fund does not hold the actual security. This can introduce a risk that the counterparty defaults on the "promise" or contract.
