GEOGRAPHIC BREAKDOWN (%)

Geographic exposure relates principally to the domicile of the issuers of the securities held in the product, added together and then expressed as a percentage of the product's total holdings. However, in some instances it can reflect the location where the issuer of the securities carries out much of their business.

GLOSSARY

Total Expense Ratio (TER): A measure of the total costs associated with managing and operating a fund. The Total Expense Ratio (TER) consists primarily of the management fee and other expenses such as trustee, custody, transaction and registration fees and other operating expenses. It is expressed as a percentage of the fund's total net asset value.

Distribution yield: The distribution yield represents the ratio of distributed income over the last 12 months to the fund's current Net Asset Value.

Product Structure: Indicates whether the fund buys the actual underlying securities in the index (i.e. Physical) or whether the fund gains exposure to those securities by buying derivatives, such as swaps (known as 'Synthetic'). Swaps are a form of contract that promises to provide the return of the security to the fund, but the fund does not hold the actual security. This can introduce a risk that the counterparty defaults on the "promise" or contract.

Methodology: Indicates whether the product is holding all index securities in the same weight as the index (replicating) or whether an optimised subset of index securities is used (optimised/sampled) in order to efficiently track index performance.
