

iBONDS ETF MATURITIES CASE STUDY

September 2020 Update

iBonds ETFs Combine Two Great Investment Ideas: Bond Ladders and Funds

In January 2010, iShares launched a series of iBonds ETFs, the first term-maturity fixed income ETFs. These funds offer investors a new way to think about bond investing: ETFs that are designed to mature at a specific date, like a bond; trade similar to a stock; and offer diversification like a fund. The iBonds ETFs allow investors a similar experience to owning a bond ladder, using ETFs that may offer more liquidity and diversification than individual bonds.

Designed to:

MATURE, like a Bond
TRADE, like a Stock
DIVERSIFY, like a Fund

Case Study: Municipal and Corporate iBonds

Since launching in January 2010, nine municipal and ten investment grade corporate iBonds ETFs have successfully liquidated. All nineteen iBonds ETFs provided a total return experience that closely approximated holding a portfolio of individual bonds.

The total return for iBonds ETFs that have matured was within +19 to -30 basis points from the initial yield less fund expenses at inception. A table with the outcome of every maturity to date can be found on page 4.

The monthly income distributions and final NAV payment will vary as bonds are entering the portfolios at different yield levels. Portfolio rebalancing, sampling, cash reinvestment and transaction costs can contribute to the variability in realized total returns.

In addition to the municipal and IG corporate funds, iShares launched High Yield and Income iBonds ETFs in May 2019 and Treasury iBonds in February 2020. The first funds in the series, IBHA and IBTA, are due to liquidate in December 2021.

[iShares.com/iBonds](https://www.ishares.com/iBonds)

2019 IG Corporate iBond Maturity – IBDK

At inception, IBDK had about 4.8 years until its target end date (March 2015 to December 2019) and a duration of 3.82 years. The ETF's duration declined as the holdings approached maturity and the fund approached its end date.

IBDK's duration declined linearly like an individual cash bond.

IBDK grew from \$10mm to \$822mm – then, the fund had redemptions of \$220mm in the last 8 months. This is consistent with the behavior of other iBonds, as some holders seek to invest in the next ladder rung before liquidation. From Mar 2015 – Jun 2018, the fund did not see any net outflows.

IBDK grew from a \$10mm initial seed amount to \$822mm in early 2019.

Lastly, in the final year of the fund's life, proceeds from coupons and maturities were invested into cash equivalents. This culminated in a final distribution of \$24.87 to shareholders on December 19th, in line with the closing price on the final day of trading. Note that the index methodology for corporate iBonds beyond 2019 was revised – proceeds are now reinvested into cash only during the final 6 months of the fund's life.

Portfolio holdings shifted to cash as the maturity date approached.

2020 Municipal iBond Maturity – IBMI

At inception, IBMI had about 6.1 years until its target maturity date (August 2014 to September 2020) and a duration of 5.2. IBMH’s duration declined as its holdings approached maturity and the fund approached its maturity date. When bonds matured between June and September of 2020, the proceeds were invested in short-term tax-exempt money market instruments (cash equivalents).

IBMI’s duration declined linearly like an individual cash bond

IBMI grew from \$2.5mm to \$357mm – then, the fund had redemptions of \$67mm in the last 12 months. This is consistent with the behavior of other iBonds, as some holders seek to invest in the next ladder rung before liquidation.

Total Assets

IBMI grew from its \$2.5mm initial seed amount to \$357mm in 2019.

Lastly, in the final year of the fund’s life, proceeds from coupons and maturities were invested into cash equivalents. This culminated in a final distribution of \$25.48 to shareholders on September 4th, in line with the closing price on the final day of trading. Note that the graph below appears jagged due to the nature of municipal bond maturities, which tend to occur on the 1st and 15th of the month.

Portfolio Composition

Portfolio holdings shifted to cash as the maturity date approached.

Fund performance and yields are shown for illustrative purposes only. There is no guarantee that other iBonds funds will experience the same investment results.

1: For IBMD, IBME, IBMF, IBMG, and IBMH, a contractual fee waiver of 12 bps was in effect for a net expense ratio of 18 bps, effective 5/23/2014. IBCB, IBDA, IBDC and IBCD had contractual fee waivers for any acquired fund fees and expenses for a net expense ratio of 10 bps, effective through termination date of the fund. Fees for IBMD, IBME, IBMF, IBMG, and IBMH were prorated. IBMD changed its ticker from MUAD, IBME changed its ticker from MUAE, IBMF changed its ticker from MUAF, IBMG changed its ticker from MUAG, and IBMH changed its ticker from MUAH on 7/7/2014. All the S&P AMT-Free Municipal Series indices extended their maturity from August 15th to September 1st of each calendar year effective 8/1/2014.

Frequently Asked Questions About iBonds Maturities

1. When do the individual bonds within iBonds ETFs start to mature?

The underlying bonds will mature through a set time period. See the table below for more details. When the last bond matures, the ETF will then delist from the stock exchange. Investors should receive their proceeds approximately two days after the fund ceases trading, though this may vary depending on their specific brokerage.

Sector	Series	Underlying Bond Maturity Dates
Municipals	Dec Series (2021 – 2028)	Jan 1 to December 15
Investment Grade Corp	Mar Series (2023) Dec Series (2020-2029)	April 1 to March 31 Jan 1 to December 15
High Yield Corp	Dec Series (2021- 2025)	Jan 1 to December 15
Treasuries	Dec Series (2021- 2029)	Jan 1 to December 15

2. What will I receive when the iBond matures?

Investors will receive the final net asset value per share, which includes the proceeds from bond maturities and any undistributed interest. For the corporate iBonds ETFs, the proceeds will be reinvested in bonds for the first six months and then reinvested into cash and cash equivalents in the final six months. The municipal iBonds will purchase tax-exempt cash equivalents as the bonds mature. Please review each fund's prospectus and SAI for more information.

3. How will the distribution be treated from a tax perspective?

The distribution, as reflected on Form 1099s to be received by shareholders, may have the following classifications:

- Liquidation Distribution** – one form of a return of capital that is not taxable to the investor, but each investor needs to determine their cost basis to verify if they had a capital gain or loss.
- Exempt-Interest Dividend** – not subject to income tax as long as the ETF had more than 50% assets invested in muni investments. This is the type of distribution the Municipal iBonds have paid since inception.
- Taxable Interest Dividend** – subject to income tax. This is the type of distribution the Corporate iBonds have paid since inception.

Detailed Structure Comparison

	iBonds ETFs	Individual bonds	Traditional Bond ETFs	Mutual funds
Diversified portfolio	Yes	No	Yes	Yes
Distributions	Monthly	Semi-annual	Monthly	Monthly
Set maturity date	Yes	Yes	No	No
Trading	On Exchange	OTC	On Exchange	Transact with Fund Sponsor at NAV
Duration declines over time	Yes	Yes	No	No
Transparent intraday prices	Yes	No	Yes	No
Liquidity	Trade on exchanges intraday at market price, which may be greater or less than its NAV	Varies based on the type of bond	Trade on exchanges intraday at market price, which may be greater or less than its NAV	Accessed directly through the fund company or through a select broker. Bought and sold once per day
Cost and expenses	Expense ratio + transaction/brokerage costs	Transaction/markup costs + brokerage costs (if applicable)	Expense ratio + transaction/brokerage costs	Expense ratio + any sales loads/redemption fees + other expenses (12b-1 fees)

Important Information Regarding iShares ETFs

Carefully consider the Funds' investment objectives, risk factors, and charges and expenses before investing. This and other information can be found in the Funds' prospectuses or, if available, the summary prospectuses which may be obtained by visiting www.iShares.com or www.blackrock.com. Read the prospectus carefully before investing.

Investing involves risk, including possible loss of principal.

Fixed income risks include interest-rate and credit risk. Typically, when interest rates rise, there is a corresponding decline in bond values. Credit risk refers to the possibility that the bond issuer will not be able to make principal and interest payments. There may be less information on the financial condition of municipal issuers than for public corporations. The market for municipal bonds may be less liquid than for taxable bonds. Some investors may be subject to federal or state income taxes or the Alternative Minimum Tax (AMT). Capital gains distributions, if any, are taxable. Funds that concentrate investments in specific industries, sectors, markets or asset classes may underperform or be more volatile than other industries, sectors, markets or asset classes and than the general securities market.

When comparing stocks or bonds and iShares Funds, it should be remembered that management fees associated with fund investments, like iShares Funds, are not borne by investors in individual stocks or bonds. There is no guarantee that any fund will pay dividends.

Shares of ETFs trade at market price, which may be greater or less than net asset value. The iShares® iBonds® ETFs ("Funds") will terminate on or about the month and year in each Fund's name. An investment in the Fund(s) is not guaranteed, and an investor may experience losses, including near or at the termination date. Unlike a direct investment in a bond that has a level coupon payment and a fixed payment at maturity, the Fund(s) will make distributions of income that vary over time. In the final months of each Fund's operation, as the bonds it holds mature, its portfolio will transition to cash and cash-like instruments. As a result, its yield will tend to move toward prevailing money market rates (and in the case of the muni iBonds ETFs, tax-exempt money market rates) and may be lower than the yields of the bonds previously held by the Fund and lower than prevailing yields in the bond market. As the Fund approaches its termination date, its holdings of money market or similar funds may increase, causing the Fund to incur the fees and expenses of these funds.

Following the Fund's termination date, the Fund will distribute substantially all of its net assets, after deduction of any liabilities, to then-current investors without further notice and will no longer be listed or traded. The Funds' distributions and liquidation proceeds are not predictable at the time of investment and the Funds do not seek to return any predetermined amount.

The rate of Fund distribution payments may adversely affect the tax characterization of an investor's returns from an investment in the Fund relative to a direct investment in bonds. If the amount an investor receives as liquidation proceeds upon the Fund's termination is higher or lower than the investor's cost basis, the investor may experience a gain or loss for tax purposes.

The Funds are distributed by BlackRock Investments, LLC (together with its affiliates, "BlackRock").

The iShares Funds are not sponsored, endorsed, issued, sold or promoted by Barclays, Bloomberg Finance L.P. or S&P Dow Jones Indices LLC. None of these companies makes any representation regarding the advisability of investing in the Funds. BlackRock is not affiliated with the companies listed above.
