Putting factors to work
Using fixed income factors, there may be a way to get more from your investment grade bond allocation.

Investors seeking income while potentially enhancing returns may consider iShares Edge Investment Grade Enhanced Bond ETF (IGEB).

The index of IGEB aims to deliver better risk-adjusted returns relative to the broader investment grade corporate bond market by using proprietary credit analytics that target high quality and undervalued bonds.

Why IGEB?
Seeks to enhance total and risk-adjusted returns relative to the broad investment grade corporate bond market

How the index is built
Focuses on higher quality, undervalued investment grade bonds

1. Starts with investment grade corporate bond universe
2. Screens out bonds that appear low quality
3. Tilts towards remaining undervalued bonds, while seeking to limit unintended risks

IGEB 0.18%
- Targets superior risk-adjusted and total returns versus broad investment grade market
- Seeks to mitigate risk by blending two diversifying factors – quality and value
- Tracks systematic, rules-based approach to bond investing

For illustrative purposes only.
Based on the methodology of the BlackRock Investment Grade Enhanced Bond Index.
Carefully consider the Funds' investment objectives, risk factors, and charges and expenses before investing. This and other information can be found in the Funds' prospectuses or, if available, the summary prospectuses which may be obtained by visiting www.ishares.com or www.blackrock.com. Read the prospectus carefully before investing. Investing involves risk, including possible loss of principal. Fixed income risks include interest-rate and credit risk. Typically, when interest rates rise, there is a corresponding decline in bond values. Credit risk refers to the possibility that the bond issuer will not be able to make principal and interest payments. International investing involves risks, including risks related to foreign currency, limited liquidity, less government regulation and the possibility of substantial volatility due to adverse political, economic or other developments. These risks often are heightened for investments in emerging/developing markets and in concentrations of single countries. There can be no assurance that performance will be enhanced or risk will be reduced for funds that seek to provide exposure to certain quantitative investment characteristics (“factors”). Exposure to such investment factors may detract from performance in some market environments, perhaps for extended periods. In such circumstances, a fund may seek to maintain exposure to the targeted investment factors and not adjust to target different factors, which could result in losses. Diversification may not protect against market risk or loss of principal. Prepared by BlackRock Investments, LLC.
