iShares by BlackRock

DISCOVER OPPORTUNITY IN EMERGING MARKET BONDS

EMB

iShares J.P. Morgan USD Emerging Markets Bond ETF
Expense Ratio: 0.39%
Duration: 6.76 years

Key takeaways

Seek income – Emerging market (EM) bonds have historically generated competitive yield versus other fixed income segments

Diversification – EM bonds have historically exhibited low correlation to bonds from developed markets[1]

Access – EMB provides exposure to over 57 sovereign entities and over 658 bonds, giving investors efficient access to an otherwise challenging asset class.

One ETF, many markets

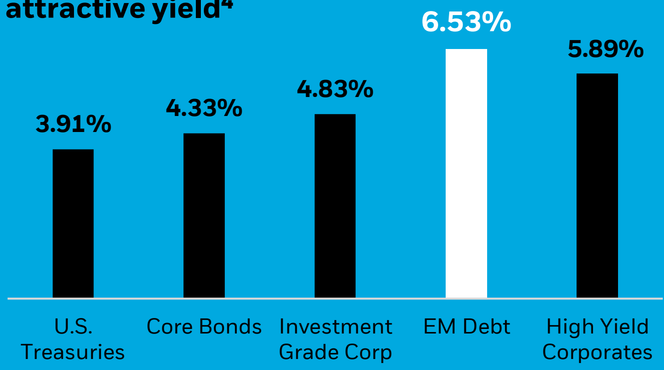
EM bonds offer yield-seeking investors the potential to draw income from historically fast-growing global economies.

The asset class continues to grow and evolve as more investors experience the income opportunities it can provide. In fact, the size of the emerging market USD-denominated sovereign asset class now stands at $1.4 trillion.[2]

The iShares J.P. Morgan USD Emerging Markets Bond ETF (EMB) gives investors access to these bonds in a cost-effective way.

Over half of the bonds in the emerging market universe are investment grade – meaning you don't have to take as much risk as you might have thought to seek income[3]

Emerging market bonds potentially offer attractive yield[4]



1 Source: Bloomberg and JPMorgan as of 12/31/2025. EMB correlation with developed market bonds measured by iShares Core U.S. Aggregate Bond ETF (AGG). EMB 3-year correlation with AGG is 0.89. 2 Source: BlackRock as of 12/31/2025. 3 Source: Bloomberg as of 12/31/2025. 4 Source: Bloomberg as of 12/31/2025. Yield shown is nominal yield. Treasuries represented by ICE U.S. Treasury Core Bond Index, Core Bonds represented by the Bloomberg US Aggregate Bond Index, Investment Grade Corporate represented by the ICE BofA U.S. Corporate Master Index, High Yield Corporates represented by the ICE BofA U.S. High Yield Constrained Index and Emerging Market Debt represented by the JPM EMBI Global Core Index. Investments in emerging market issuers are subject to a greater risk of loss than investments in issuers located or operating in more developed markets. Non-investment grade debt securities (high-yield/junk bonds) may be subject to greater market fluctuations, risk of default or loss of income and principal than higher-rated securities such as investment grade debt or U.S. Treasuries. **Index performance is for illustrative purposes only. How does emerging market debt fit into a portfolio?

Emerging market bonds can be used to potentially boost income and diversify a multi-asset portfolio.

- **Seek income:** The emerging market bond market is over 55% investment grade[3] and offers the potential to generate higher income than other fixed income asset classes.
- **Diversification:** Emerging market bonds have historically exhibited low correlation to developed market bonds.[1]

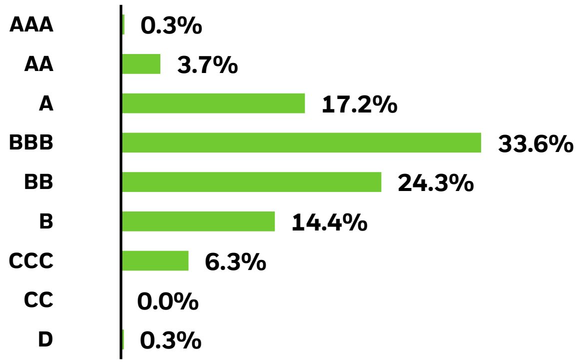
Credit quality breakdown



Source: BlackRock as of 12/31/2025. Credit quality ratings on underlying securities of the fund are received from S&P, Moody's and Fitch and converted to the equivalent S&P major rating category. This breakdown is provided by BlackRock and takes the median rating of the three agencies when all three agencies rate a security, the lower of the two ratings if only two agencies rate a security, and one rating if that is all that is provided. Unrated securities do not necessarily indicate low quality. Below investment-grade is represented by a rating of BB and below. Ratings and portfolio credit quality may change over time.

Carefully consider the Funds' investment objectives, risk factors, and charges and expenses before investing. This and other information can be found in the Funds' prospectuses and, if available, summary prospectuses, which may be obtained by visiting www.iShares.com or www.blackrock.com. Read the prospectus carefully before investing.
Investing involves risk, including possible loss of principal.

Fixed income risks include interest-rate and credit risk. Typically, when interest rates rise, there is a corresponding decline in bond values. Credit risk refers to the possibility that the bond issuer will not be able to make principal and interest payments. Non-investment-grade debt securities (high-yield/junk bonds) may be subject to greater market fluctuations, risk of default or loss of income and principal than higher-rated securities.

International investing involves risks, including risks related to foreign currency, limited liquidity, less government regulation and the possibility of substantial volatility due to adverse political, economic or other developments. These risks often are heightened for investments in emerging/developing markets or in concentrations of single countries.
Diversification and asset allocation may not protect against market risk or loss of principal.
